EDGE CHEM DEGREASER

Rev. 1 T.D.S.

DESCRIPTION

EdgeChem's Degreaser is designed to remove wax, silicone, oil and grease that may prejudice the topcoat adhesion and final appearance.

PHYSICAL PROPERTIES

Boiling Point	:	~149°C
Flash Point	:	~37.8°C
Specific Gravity	:	~0.793

SUGGESTED USES

For cleaning and degreasing metal surfaces before they are top coated.

APPLICATION

When a repair is to be made or a finish is to be recoated, the first thing to do is invariably to clean and degrease the body panel under treatment.

Wet a clean cloth and clean/degrease the surface under treatment. Immediately thereafter, rub the surface dry with clean, dry cloths. Always use two cloths, as one cloth will merely shift rather than remove dirt and grease.

The purpose of cleaning and degreasing is to remove residual grease, oil, wax, silicones, sand, etc. If this is omitted, then residual dirt will get stuck in scratch marks when they are flatted. Adhesion of the paint system subsequently applied to the contaminated surface will be poor and the finish will come off after some time.

Note: Replace cloths being used for degreasing and cleaning regularly by clean ones. Never throw them into the dustbin when still wet to avoid heating (fire risk).

SHELF LIFE

4 years
